

GreenPlumbers

First Climate Care Seminar a Success in Livermore!

California Energy Expert Gary Klein and PHCC's Steve Lehtonen held the first GreenPlumbers Climate Care workshop in Livermore on September 19, 2007. The workshop discussed everything from Water and Energy and how it affects our Climate to the culture change that is affecting plumbers throughout California and the United States.

GreenPlumbers accredited in Climate Care are the logical choice to assist homeowners in correctly choosing the right water and energy option for their homes, taking into consideration short term and long term cost benefits, environmental benefits and existing services and appliances. In addition, GreenPlumbers will be able to provide an environmental master plan for future home improvements.

Addressing the group during the assessment portion of the seminar workshop, Steve Lehtonen congratulated the sixteen attendees on being the first in the United States to complete a portion of the complete thirty-two hour GreenPlumber series of courses. Other courses include Caring for Our Water, Solar Hot Water, Water Efficient Technology, and the Water/Energy Inspection Program. The first group of Climate Care graduates will receive their certification upon final curriculum validation by the Joint Australia-California Advisory Development Committee.

Lehtonen indicated that the Climate Care and Caring for Our Water workshops will be offered throughout California beginning in late 2007, with a full roll-out of courses in early 2008.

Climate Care graduates at the Livermore session included John Roeber, Brian Phillips, Ricky Marques, Rick Lerch, Steven D'Amico, Joe Perry, Edward Asuncion, Jim Box, Daniel Marks, Jose Escorsio, Albert Nahman, Adam Eddy, Antonio Zavala, Brad Roeber, Mark Boehl and Ray Bonetti.
